

Call Center Operations Platform

Transform operations with unified case management for government service delivery

Built on Salesforce Service Cloud, our platform empowers call center teams to manage complex workflows involving contact verification, medical screening, document validation, and coordination across multiple stakeholders. Agents have unified access to case information, family relationships, and specialized requirements enabling efficient processing from initial contact through service completion. The system handles omnichannel routing, tracks all interactions, and maintains operational visibility across the entire service lifecycle.

KEY CAPABILITIES

- Unified case management with family grouping
- Omnichannel routing and workload distribution
- Medical screening workflow integration
- Multi-stage status progression tracking
- Document validation and verification tools
- Real-time supervisory dashboards
- Call logging and outreach tracking
- Language-based agent assignment routing

WHY THIS MATTERS

- Reduce processing time with automated workflows
- Improve service quality through visibility
- Ensure compliance with audit trail tracking
- Enable data-driven operational decisions
- Scale operations without adding overhead
- Support complex family case coordination
- Maintain complete interaction history
- Track performance metrics in real-time

Key Features & Modules

The Right Team.
The Right Outcomes.™

Modules designed for efficient case management across complex service delivery workflows

Case Management System

Create and track cases through multi-stage workflows. Manage individual and family units with automated status progression and complete interaction history.

Omnichannel Routing

Distribute work intelligently across agent teams. Route based on language preferences, specializations, and workload with automated assignment capabilities.

Contact & Family Management

Maintain contact profiles with household relationships. Automatically detect family groups and coordinate multi-member cases through unified workflows.

Medical Screening Workflows

Guide agents through health assessment processes. Store confidential medical information separately with privacy controls and special needs tracking.

Interaction Logging

Track all contact attempts, calls, and communications. Maintain complete interaction history with timestamps, notes, and follow-up task management.

Document Validation

Verify travel documents and identification with expiration tracking. Visual indicators alert agents to validity concerns and missing documentation.

Stage Progression Tracking

Move cases through defined workflow stages automatically. Track processing milestones from initial outreach through service completion with audit trails.

Supervisory Dashboards

Monitor team performance in real-time. Track key metrics including case volumes, processing times, and status distribution with drill-down capabilities.

Bulk Data Import

Process large volumes of records through CSV imports. Map fields dynamically, validate data quality, and handle errors with batch processing capabilities.

Service Completion Tracking

Record completion milestones and final outcomes. Generate completion reports, close cases systematically, and maintain historical records for analysis.
